FREE RESOURCE · STARTER PACK

The Website *Starter Pack*

Build a business website with Claude Code that looks like you, takes payments, collects sign-ups, gets found on Google and AI search, and keeps itself up to date. The 10 tips from my video, every prompt, and the launch checklist I use before anything goes live.

I built womenlead.ai this way without writing a line of code myself. Copy the prompts, change the bits in [square brackets], and paste them into Claude Code in order.

WOMEN LEAD AI

Wiktoria Korbecka · womenlead.ai

THE SHORT VERSION

10 things I wish I knew *before* I built my website

01

Decide what it's for

Pick the one action you want visitors to take: join the newsletter, fill in the contact form or buy. Let Claude interview you, then save the brief to CLAUDE.md.

02

Make it your own

Give Claude two or three sites you love from outside your industry and say exactly what you like. Add your brand kit: logo, exact colour codes, fonts, real photos.

03

Pick a boring, proven setup

Next.js, React and Tailwind, kept in a folder, backed up on GitHub, put live by Vercel. You don't need to understand it.

04

Plan it, build one page first

Plan every page in plan mode, cut what you don't need, then get the homepage perfect and save its design rules before you build the rest.

05

Design for mobile

Most visitors are on a phone and Claude designs for big screens by default. Ask it to check every page at phone size.

06

Use GitHub

Every change is saved in the cloud, so you can always go back.

07

Know where your data goes

Forms, sign-ups, downloads and payments each belong to a real person. Use proper services (Stripe, a real database), add a consent checkbox and test it all yourself.

08

Get found

Titles and descriptions, a share image, a sitemap, an llms.txt file, and a page with a transcript for every video or podcast.

09

Check, launch, measure

Run the launch checklist, then add analytics: the numbers (Vercel Analytics or Google Analytics) plus heatmaps and recordings (Microsoft Clarity).

10

Make it update itself

New episodes, your latest video, testimonials, prices and events can all appear by themselves. Ask Claude what you could stop updating by hand.

Plan it and make it *yours*

TIP 1 · BEFORE ANYTHING ELSE

Let Claude interview you

I want to build a website for my business, [what you do and who for]. Before you build anything, interview me one question at a time. Ask how visitors should feel on the site, the one action they should take, what matters most to my business, and anything else you need. Then write a short brief and save its key points to CLAUDE.md so you read it before every change.

TIP 2 · REFERENCES

Learn from sites you love

Here are three websites I love: [link], [link], [link]. Don't copy them, learn from them. On the first I like [the white space, which makes it feel elegant]. On the second I like [the way the navigation bar works]. On the third I like [what exactly]. Suggest how my site could use these ideas in my own style.

TIP 2 · YOUR BRAND KIT

Give Claude your brand

Use my brand kit on every page: logo [file], colours [exact hex codes, for example #602D37], fonts [heading and body fonts], and these real photos of me [files]. Never use stock photos or colours that aren't in this list. Add all of it to CLAUDE.md.

TIP 3 · THE SETUP

A boring, proven setup

Set up a website for my business with a boring, proven setup: Next.js, React and Tailwind. Keep it in one folder on my computer, back it up on GitHub and put it live on Vercel. Explain every step in plain English and ask me before you sign up for anything.

TIP 4 · SWITCH ON PLAN MODE FIRST

Plan the whole site

From the brief in CLAUDE.md, plan every page this site needs (for example home, about, services, contact) and what goes on each. Don't build anything yet. I'll cut what I don't need, then we'll build the homepage first.

Build it *properly*

TIP 4 · ONCE THE HOMEPAGE IS RIGHT

Save the design rules

Save the design rules from this page to CLAUDE.md: fonts, colours, spacing, buttons and layout. Follow them for every new page you build, and reuse the components from this page instead of making new ones.

TIP 4 · EVERY NEW PAGE AFTER THAT

One more page, same design

Make a new page exactly like [the page you're happy with] for [the new topic]. Same layout, same components, only the content changes.

TIP 5 · AFTER EVERY CHANGE

Check it on a phone

Check this page at phone size and fix anything that is not working. Resize your preview and take screenshots to check. Then check it on a tablet too.

TIP 6

Back it up on GitHub

Set up GitHub for this website so every change is saved. Commit after each change with a short message that says what changed, and tell me how to go back to an earlier version if I need to.

TIP 7 · ANYTHING THAT COLLECTS DATA

Know where it goes

For every form, sign-up, download and payment on this site, tell me: where does this data get saved, who gets notified when someone signs up, and are there any secrets visible in the website code? Payments must go through Stripe and sign-ups into a proper database. Add a consent checkbox to every email sign-up.

THE PROMPTS · PART 3

Get found, then let it *run itself*

TIP 8 · ONCE THE SITE IS BUILT

SEO and AI search audit

Do an SEO and AI search audit of my site. Check every page has its own title and description, a share image, that there is a sitemap and an llms.txt file, and that each video or podcast has its own page with a transcript. List what's missing, then fix it.

TIP 9 · THE NUMBERS

Analytics

Switch on Vercel Web Analytics for this site (it doesn't need cookies). If I'm not on Vercel, set up Google Analytics 4 instead, tied to a cookie banner so it only runs when visitors agree.

TIP 9 · HEATMAPS AND RECORDINGS

Microsoft Clarity

Add Microsoft Clarity to every page using this tracking code: [paste the code from clarity.microsoft.com]. Load it after the page so it doesn't slow anything down, and check the tag is live on the site.

TIP 9 · ONCE A WEEK

Weekly analytics review

Go over my website analytics from the last 7 days. Summarise what's working, what isn't and the three changes you would make first, in plain English.

TIP 10

Make it update itself

Look at my site and list everything I currently update by hand (for example new podcast episodes, my latest video, testimonials, prices, events). For each one, suggest how it could update itself automatically, then set up the ones I pick.

TEMPLATE

Your *CLAUDE.md* starter

Claude Code reads this file before every change. Fill it in once (or let the interview prompt fill it in for you) and keep it up to date.

```
# Website brief

Business: [what you do, in one sentence]
Who it's for: [your ideal visitor]
The one action: [join the newsletter / book a call / buy]
Visitors should feel: [for example welcome, clear, confident]
Priorities: [what matters most, in order]
Tone: [for example warm, practical, no jargon]

# Brand
Logo: /public/logo.svg
Colours: primary #______  background #______  accent #______
Fonts: headings [font]  body [font]
Photos: only real photos from /public/photos, never stock

# Design rules (add once the homepage is right)
- Spacing, buttons, layout: [saved from the homepage]
- Reuse existing components before making new ones
- Check every page at phone size before you finish

# Data
- Payments: Stripe   Sign-ups: [database or email tool]
- Every email sign-up has a consent checkbox
- No secrets or API keys in the website code
```

BEFORE THE VERY FIRST LAUNCH

The launch *checklist*

Ask Claude to go through this with you, then check each one yourself.
Do it again every time you change a form.

- [ ] **Every link works**
  No dead pages. Ask Claude to crawl the whole site and list any broken links.
- [ ] **A friendly page-not-found page**
  With a way back to your homepage, in your own design.
- [ ] **Every form tested end to end**
  Fill in your own form, check where it lands, check the email arrives and the download works.
- [ ] **Image descriptions (alt text)**
  For screen readers and for search.
- [ ] **Text that's easy to read**
  Enough contrast between text and background, also on a phone.
- [ ] **Mobile checked**
  Every page at phone size, menus and buttons included.
- [ ] **A privacy policy**
  If you collect any contact details, plus a consent checkbox on every sign-up.
- [ ] **Titles, descriptions and a share image**
  On every page, plus a sitemap and an llms.txt file.
- [ ] **Analytics**
  The numbers (Vercel Analytics or Google Analytics) and heatmaps and recordings (Microsoft Clarity).
- [ ] **No secrets in the code**
  Payments through Stripe, passwords and keys never in the website code.

AFTER LAUNCH

Find out what *actually works*

The numbers

How many people visit, and from where

Instagram, Google, your podcast: this tells you which marketing is working. Use Vercel Analytics if your site is on Vercel (no cookies needed), otherwise Google Analytics.

Heatmaps + recordings

What people do once they're there

Microsoft Clarity is free. Heatmaps show where people click (often on things that aren't buttons), scroll maps show how far down they get, and recordings replay real visits.

The rule of thumb

If only 30% of visitors reach your sign-up form, move it up

Look at your scroll map once a week. Anything important that most people never scroll down to belongs higher on the page.

Every week

Your 10 minute routine

Ask Claude to go over your analytics, summarise what's working and what isn't, and pick the three things to improve. The first version is never perfect, but you can improve it really easily with Claude.
