FREE RESOURCE · TOOL LIST

8 Tools That *Aren't AI*

The basic marketing and sales tools most founders skip. Every link, how I set each one up, and how I use the data with Claude afterwards.

Everyone is chasing the newest AI tool. But AI is only as good as what you give it. Set these up first, and your AI tools finally have real data to work with.

WOMEN LEAD AI

Free

01 HubSpot email tracking

See the moment someone opens your email or clicks a link in it.

1. Install the free HubSpot Sales extension for Gmail or Outlook and sign up for a free HubSpot account.
2. Leave "Track email" ticked when you send a proposal or follow up.
3. Watch the notifications: several opens in a short time usually means it's being forwarded around the team.

My tip: Follow up when they're looking at it, not a week later. Write a different follow up for opened and not opened.

Free

02 Microsoft Clarity

Heatmaps and recordings of real visitors on your website.

1. Create a project at clarity.microsoft.com and copy the tracking code.
2. Ask Claude Code to add it to your site (one snippet in the page head), or use the integration for your website builder.
3. After a few days, open Recordings and filter for rage clicks and dead clicks.

My tip: Watch 10 recordings before you change anything. Check the scroll heatmap: if most people never reach your sign-up form, move it up.

clarity.microsoft.com

Free

03 Meta and LinkedIn ad libraries

Every ad a company is running right now, copy, images and videos included.

1. Meta: facebook.com/ads/library, pick your country and "All ads", type a competitor's name.
2. LinkedIn: linkedin.com/ad-library, search by company or keyword.
3. Sort or filter for ads that started running months ago.

My tip: Nobody keeps paying for an ad that doesn't work. Use long-running ads as a starting point for your own angle, never a copy.

facebook.com/ads/library I linkedin.com/ad-library

A few free searches a day

04 AnswerThePublic

The real questions people type into Google about your topic.

1. Go to answerthepublic.com and type a short topic, e.g. "LinkedIn for founders".
2. Read the questions grouped by who, what, why, how and can.
3. Export or copy the ones your customers would ask.

My tip: Every question is a post, a video or a section of your sales page, in your customers' own words. One search can give you a month of ideas.

Free

05 Google Search Console

The exact searches that bring people to your website, and how often you get clicked.

1. Add your site at search.google.com/search-console and verify it (the DNS option covers the whole domain; Claude can walk you through it).
2. Open Performance, tick Impressions and Clicks.
3. Sort by impressions and look for searches with lots of impressions but very few clicks.

My tip: Those are your easiest wins: Google already thinks you're relevant. Write a better page title, or a page that answers that question properly.

Paid (Sales Navigator)

06 LinkedIn Smart Links

Send your deck or case study as a link and see who viewed it, when, and for how long on each page.

1. In Sales Navigator, open Smart Links and upload your deck, case study or one pager.
2. Send the link in a message instead of attaching the file.
3. Check the viewer report: who opened it and which pages they spent time on.

My tip: Only worth paying for if LinkedIn is already one of your main sales channels. If they skipped straight to pricing, your next conversation is about price.

Free

07 PageSpeed Insights

How fast any page loads on a phone and a computer, with a score out of 100 and what's slowing it down.

1. Paste a page from your site into pagespeed.web.dev.
2. Check the Mobile tab first: most of your visitors are on their phone.
3. Work down the list, starting with images that are too big and plugins you don't use.

My tip: A slow site loses people before Clarity can even record them. Run it again after every big change.

pagespeed.web.dev

Free

08 UTM links

A few extra words on the end of a link that tell Google Analytics exactly where a visitor came from.

1. Open Google's Campaign URL Builder.
2. Fill in source (linkedin), medium (post) and campaign (a name you'll recognise), then copy the link.
3. Use a different link for every post, email and channel, and read them in Google Analytics under Traffic acquisition.

My tip: This ties everything else together: it shows which post, email or channel actually brought you a customer, not the one that just feels busiest.

THEN BRING IN AI

Paste into Claude or ChatGPT with your data

Here are my Clarity notes, my top Search Console queries and the AnswerThePublic questions for my topic. Tell me where people are getting stuck on my page, which questions my page doesn't answer, and rewrite the page so it does. Base everything on this data, not on general advice.
