WOMEN LEAD AI · FREE KIT

THE CLAUDE ARTIFACTS KIT

5 apps that run my business, for a $20 Claude subscription and no code

Everything from my "5 Claude artifacts" video: what an artifact is, the exact prompts I used to build my review page, CRM, quote builder, content dashboard and ROI calculator, and how to put any of them on your own website.

01 What an artifact is

02 Review page

03 Custom CRM

04 Quote builder

05 Content dashboard

06 ROI calculator

07 Your own website

+ Which subscriptions each one replaces

$20 / month instead of up to $300 a month of separate tools.

Anything highlighted like this is yours to fill in.

01 WHAT AN ARTIFACT IS

A small app Claude builds for you, in one conversation.

An artifact is a little web page Claude builds and keeps for you. It can remember things between visits, other people can open it if you share it, and it can connect to tools you already use, like Gmail or your calendar. You don't write any code: you describe what you want and keep talking until it's right.

WHERE Claude desktop app or claude.ai › new chat (or the Artifacts panel)

COPY AND PASTE TO START ANY ARTIFACT

Build me `a quote builder for my brand deals` as an artifact. It's for `brands who ask for my rates`. Make it work well on a phone, use my brand colours `#602D37 and #ECB398`, and remember what people enter between visits.

Be sure to say "as an artifact". In a normal chat or a Claude Code session, Claude might otherwise just write the code into a file. With those two words it builds the app and opens it next to the chat.

+ THEN JUST KEEP TALKING

Every change is one sentence away.

TRY

Make this button bigger.

Use my brand colours here.

Add another option for `raw footage` at `$250`.

+ SHARING

Private by default. You choose who gets in.

WHERE Open the artifact › Share (top right)

Your team (a CRM full of contacts and deal values): invite people by email. Only they can open it.

The world (a rate card or a calculator): set general access to "Anyone with the link". They can use it but not edit it.

02 REVIEW PAGE

My own Frame.io, except the feedback goes to Claude.

REPLACES **Frame.io and similar review tools · about $15–25 a month**

Claude puts each edit on this page. I press play, and the moment I start typing the video pauses and my note is pinned to that exact frame. When I'm done I send every note to Claude in one go, instead of drip-feeding it one message at a time.

COPY AND PASTE

Build me a video review page as an artifact. Show a video player with speed buttons (1x, 1.5x, 2x). When I start typing a note the video pauses and the note is pinned to that timestamp. I can mark a range for a whole section and draw a box on the frame. Show all notes on a timeline and in a list I can tick off. Add a "Send all to Claude" button that gives you every note at once, with its timestamp. Save my notes between visits.

Result from my last video: 30 notes sent in one go, and the next version came back with every one of them addressed.

03 CUSTOM CRM

A CRM that goes out and finds the leads for you.

REPLACES **Paid sales CRMs and lead-finding tools · about $50–100 a month**

Most CRMs wait for you to type the data in. This one is proactive: Claude finds companies that fit, I approve or reject them, Claude writes the first email, and the CRM tracks who replied. It works for brand deals, consultants, agencies and founders.

COPY AND PASTE

Build me a CRM as an artifact for finding brand partnerships for my YouTube channel about AI. Each week, find 10 companies that fit my audience of women who run businesses, with a short note on what they do and why they're a good fit, and put them in a review list. When I approve one, draft a first outreach email in my voice for me to edit. Track every deal from first contact to paid in a pipeline, and show my reply rate. Connect to my Gmail so approved emails send from my account, and never send anything without my OK.

Connect your tools first: Settings › Connectors › Gmail (and HubSpot if you use it, so you can see who opened your emails).

04 QUOTE BUILDER

A professional quote in under a minute, from your phone.

REPLACES **Proposal tools like PandaDoc or Proposify · about $20–50 a month**

The old way: open the spreadsheet, work out the price, copy it into a document, make it look professional, export a PDF, attach it, send it. Half an hour for one quote. Now the client ticks what they want and the total adds itself up. It works for photographers, consultants, wedding planners and anyone who prices packages.

COPY AND PASTE

Build me a rate card and quote builder as an artifact, designed for phones first. At the top, a short intro about me: `name, what I do, my follower numbers and who my audience is`. Then every deliverable with its price: `YouTube video $2,500, Instagram Reel $900, TikTok $700`. Then add-ons people can tick: `whitelisting +$200, usage rights 30/60/90 days, exclusivity +$400`. The total updates as they tick. Give `10%` off when they pick `3` or more deliverables, and make that discount obvious. Add a "View quote" button that shows a clean quote with the client's logo and name, and a form so they can send me the package with their dates.

+ SEE WHERE PEOPLE CLICK

Something a PDF could never tell you.

THEN SAY

Record every tick and untick, even if they never press send, and give me an owner-only view with a click heatmap: which deliverables people choose, which add-ons they tick and take off again, and where they drop off.

How I use it: if lots of brands tick whitelisting and then take it off again, my whitelisting price is probably too high. If most pick a Reel over a YouTube video, I know where to focus.

05 CONTENT DASHBOARD

Posting is one thing. Knowing what works is another.

REPLACES **Social analytics dashboards · about $20–50 a month**

Instead of opening YouTube Studio, then Instagram Insights, then TikTok analytics, I get one page: views, engagement and follower growth for the last 30 days, my top 5 and bottom 5 posts with Claude's reason for each, what's trending in my niche, and five ideas for next week.

COPY AND PASTE

Build me a content dashboard as an artifact that brings `YouTube, Instagram and TikTok` together for the last 30 days: total views, engagement rate and follower growth, then a bar for each platform. Show my top 5 and bottom 5 posts across all of them, and next to each one say why you think it worked or flopped. Add a "What's trending" section for `AI tools for women in business`, and a button "What should I post next week?" that gives me 5 ideas with hooks based on what's already working for me.

Your numbers: export them from each app (or paste them in) the first time. A brand asking for proof that your content performs? Send them the dashboard.

06 ROI CALCULATOR

Answer "is this actually worth it?" with their own numbers.

REPLACES **Calculator builders like Outgrow · about $25–100 a month**

COPY AND PASTE (THE SOLAR EXAMPLE FROM THE VIDEO)

Build me an ROI calculator as an artifact for `people thinking about solar panels`. Sliders for `monthly electricity bill, system cost after grants, system size and energy price rise each year`. Show three results: how much they save in year one, the year it pays for itself, and the profit after `25` years, plus a chart of money in their pocket over time that clearly shows the moment it goes from cost to profit. Add a short note on the assumptions.

OR, FOR 3D PRINTING

Build me a calculator as an artifact that tells me what each 3D print really costs: filament used, electricity, printer wear, my time and failed prints, so I know what to charge the end customer.

07 PUT IT ON YOUR OWN WEBSITE

A subdomain is free. You don't need to buy a new domain.

If you own `yourbrand.com`, you can put any artifact on `calculator.yourbrand.com` or `crm.yourbrand.com` at no extra cost. I did exactly this: **calculator.womenlead.ai** is the solar calculator from the video.

> STEP 1 · IN THE SAME CHAT WHERE YOU BUILT IT
>
> Turn this into a website and put it live on my `Vercel` account.

Vercel is the free hosting I use. If you use something else, just name it instead.

1. **In Vercel:** open the project Claude just made › **Domains** › **Add** › type `calculator.yourbrand.com` › **Add Domain**.
2. Vercel shows a red **Invalid Configuration** warning. That's fine: your domain just doesn't know about it yet. Click **View DNS configuration**.
3. Vercel gives you one record to copy:

Type	Name	Value
CNAME	calculator	**copy the value Vercel shows you**

4. **Where you bought your domain** (GoDaddy, Namecheap…): open the domain › **DNS** › **Add New Record**.
5. Type **CNAME**, name **calculator**, value: paste what Vercel gave you › **Save**.
6. Back in Vercel, give it a few minutes and click **Refresh**. The warning turns into **Valid Configuration**. That's your own tool on your own website.

Check first: make sure no record called `calculator` already exists in your DNS, and don't change your other records.

+ WHAT EACH ONE REPLACES

Artifact	Instead of	Typical cost
Review page	Frame.io-style review tools	**$15–25/mo**
Custom CRM	Sales CRM + lead finding	**$50–100/mo**
Quote builder	Proposal software	**$20–50/mo**
Content dashboard	Social analytics tools	**$20–50/mo**
ROI calculator	Calculator builders	**$25–100/mo**
All five	**One Claude subscription**	**$20/mo**

STOP ASKING CLAUDE FOR ANSWERS. ASK IT FOR TOOLS.

Every time you catch yourself doing the same thing twice, that should be your next artifact. Watch the full video on YouTube @WiktoriaKor, and join the Women Lead AI community at skool.com/she-leads-ai-1882.
