FREE PROMPT PACK

THE THUMBNAIL PROMPT PACK

The exact prompts I use to build my AI double and make 10 scroll-stopping YouTube thumbnails in about 5 minutes, with Claude and Higgsfield.

WOMEN LEAD AI

by Wiktoria Korbecka · womenlead.ai

Before you start

For a long time my thumbnails were the weakest part of my whole channel. I'd spend hours on a video and 10 minutes on the thumbnail. Then I'd wonder why nobody clicked.

This pack is the system I use now. You don't need design skills. You need three folders, one good character sheet and the patience to generate **one** thumbnail before you generate ten.

What you need (15 minutes to set up)

- **Claude** (desktop app or Claude Code)
- **Higgsfield**, connected to Claude: Settings › Connectors › Discover › Higgsfield › Connect
- The model I use for thumbnails: **GPT Image 2.5**

Your three folders

1. references

5 to 10 screenshots of thumbnails that made you stop, from niches that have nothing to do with yours

2. ai-double

6 to 8 selfies plus the character sheet you'll make on the next page

3. brand

Your colours, fonts and logo (your brand guidelines PDF is perfect)

Borrow the structure, not the thumbnail. You're taking the idea (big text left, face right, one bright object), never someone else's face or logo.

Where to find references

Search YouTube for personal finance, home renovation, fitness and travel. Screenshot the ones you'd click. Those niches have spent years learning what makes people stop scrolling.

STEP 1

Build your AI double

If you give the AI one photo of your face looking straight at the camera, that's all it knows about you. The moment a thumbnail needs you side on or looking up, it guesses. And it usually guesses wrong. You end up with someone who looks like your cousin.

Take 6 to 8 selfies: straight on, turned left, turned right, a little from above, a little from below. Natural light, no filters. It has to look like you on a normal day. Drop them into your ai-double folder, then give Claude this prompt:

> Here are 8 selfies of me in the folder ai-double. Make a character sheet with GPT Image 2.5 on Higgsfield: me from the front (full body), from the back (full body) and a close-up portrait, side by side on a plain white background with soft natural light.
>
> Keep my exact face, face shape, eyes, nose, lips, skin and age from the photos. Do not beautify me, do not age me up, no makeup changes.
>
> Outfit: [describe what you'll wear in your videos, e.g. cream fleece jacket over a sage green top].
>
> Write the full prompt yourself, upload my photos as references and run it.

Check it properly (this is where most people rush)

Look at the sheet like a stranger would. If anything is off, tell Claude exactly what:

> My face is rounder than this. Run it again.

> My eyes are blue-grey, not brown, and my hair is straighter with curtain bangs. Keep everything else and run it again.

> This looks older and more glamorous than me. Make it look like me on a normal day. Same photos, run it again.

Don't move on until you're happy. If you look off on the character sheet, every thumbnail after it will look off too. Pick the one that looks most like you, not the prettiest one.

STEP 2

Generate ONE thumbnail first

I used to ask for 10 or 15 options at once. All of them had something wrong: the wrong lipstick, the wrong clothes. I burned a lot of credits. Fix one, then multiply it.

> Make ONE YouTube thumbnail (16:9) for my video: "[video title]". The video is about [one sentence].
>
> Use:
> - my character sheet in ai-double as the face reference (exact same face, a genuinely happy, warm, confident expression)
> - the structure of the thumbnails in references (don't copy their faces, logos or text)
> - my colours and fonts from brand
>
> 3 words or fewer on the thumbnail. One face, one clear emotion. Use GPT Image 2.5 on Higgsfield.

STEP 3

Happy? Make the other nine

> I like this one. Now make 9 more options with different ideas: a before and after, a bold claim, a question, an object in my hands, a big number. Same face reference, same rules. Save them all as t1 to t10.

STEP 4

The phone test

Most people see your thumbnail tiny, on their phone.

> Put all 10 thumbnails side by side, really small, the way they'd look in a YouTube feed on a phone. Make it one image I can look at.

The ones that still work at that size are your contenders. If you can't read the text or tell what the face is doing, it's out.

STEP 5

Ask for more of the winner

> I like number 4. Give me 3 more versions of that one with different words on it. Keep everything else the same.

That's usually where the winner comes from.

The 3 rules checklist

Run every thumbnail through this before you upload it.

- [ ] **3 words or fewer.** If it needs a sentence, it's a title, not a thumbnail.
- [ ] **One face, one clear emotion.** Don't make people guess how you feel.
- [ ] **It looks different from everything else in your niche.** Put it next to your competitors. If it blends in, go back to your references folder.
- [ ] It still reads at phone size.
- [ ] It looks like you (check the face against your character sheet).

Let your audience decide. YouTube lets you test thumbnails (Test & compare in YouTube Studio). Upload your top three and let the data pick the winner.

Want to build this with other women?

You've got the prompts. Now imagine having a room full of women making their thumbnails, sites and content with AI alongside you.

Women Lead AI is a community of women learning AI together, to grow careers, build businesses and stop figuring it out alone. Inside you'll find weekly live sessions, real workflows you can copy, and women who actually get it.

Join us inside: **skool.com/she-leads-ai-1882**

You don't have to figure this out alone. Come say hi.
