

FREE PROMPT PACK

Gingerbread London: *5 AI video models*, one prompt

Every prompt, frame and lesson from my test of Veo 3.1, Kling 4.0, MiniMax H3, Wan 3.0 and Seedance 2.5, where I gave each model the same photo of me and the same prompt and watched a snow globe turn grey London into gingerbread.

BY WOMEN LEAD AI · WOMENLEAD.AI

Start here

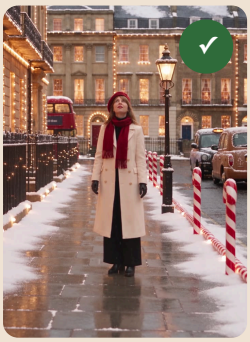

One photo, one prompt, *five models*

The question I get asked most is which AI video model you should actually use, so I tested five of them properly. Every model got **the same start frame of me** on a grey, rainy London street and **the same prompt**, in which I find a snow globe on a bench, shake it, and the camera dives through the glass into a London made of gingerbread.

How I ranked them

1. **Does it still look like my face** from the first shot to the last?
2. **Do I look like a real person**, or is it obviously AI?
3. **How good is the gingerbread transformation** itself?
4. **Does it follow the prompt**, beat by beat?

Rank	Model	In one line
#1	**Seedance 2.5**	The only one that still looks like me and like a real video.
#2	Wan 3.0	An impressive gingerbread street, but my face, teeth and lipstick change.
#3	MiniMax H3	My face drifts as soon as the camera moves.
#4	Kling 4.0	A fast, clean dive into the globe, but I don't look real.
#5	Veo 3.1	Not my face, even in the very first shot.

Seedance 2.5

Wan 3.0

MiniMax H3

Kling 4.0

Veo 3.1

What you need

- **Higgsfield**, where all five video models live, plus Nano Banana Pro for the start frame.
- **Claude connected to Higgsfield**, so Claude writes the prompts, runs the jobs and checks every result for you.
- **A character sheet of you** and one start frame, both made as images before any video.

Step 1

Let Claude *run the models*

I didn't click around a website and copy prompts from tab to tab. I connected Higgsfield to Claude, so I could describe what I wanted in plain English, and Claude picked the model, sent the job, waited for it and then **looked at the result before reporting back**.

That last part is what made comparing five models fast. Claude pulled frames out of every clip and told me things like "your face drifts in the final close-up" or "the bus never turns into gingerbread", so I didn't have to watch each one ten times.

Test the idea *as an image* first

Because it's nearly December, I asked Claude for Christmas ideas and had it make a quick image of each favourite caught halfway through the transformation. Seeing them side by side made the choice easy, and gingerbread London won.

Gingerbread London, knitted London, gift-wrapped New York and an elf workshop office, each one half transformed.

Give the magic a trigger. My first version used a sparkly wave sweeping down the street, but it felt flat because nothing I did made it happen. A snow globe that I pick up and shake gives the transformation a cause, and the dive through the glass becomes the moment people remember.

Step 2

A character sheet *keeps you, you*

My character sheet shows a close-up of my face and full-length shots from the front, the side and the back, all in the same outfit of a red beret, a red fringed scarf, a long cream double-breasted coat and black leather gloves. When the camera moves around you or you turn away, the model already knows what you look like from that angle instead of guessing.

My character sheet for this video: face, front, side and back, on a plain grey background.

Make *one sheet per outfit*

Whenever my outfit changes, as it does when I travel back through different eras, I make a separate character sheet for each one. Every version of the outfit is then locked in before a single video starts, and that is what keeps the result looking realistic rather than obviously AI.

Write the outfit into the prompt too. Every video prompt in this pack opens by naming the face and the full outfit, and ends with "she always stays fully human and unchanged", so the model is reminded what must not change while everything around you does.

Step 3

Make the first frame *as an image*

Before any video, Claude used my character sheet to make a start frame with **Nano Banana Pro**: just me walking down a grey, rainy Georgian street with a red double-decker behind me. Every one of the five models got this exact image as its first frame, which is what makes the comparison fair.

The start frame every model received.

A test image where the oven gloves don't match.

Spot it for 3 credits, not 120. Look closely at the oven gloves in the test image on the right, because they aren't a matching pair. As an image, a mistake like that costs about 3 credits to fix, whereas if I had animated it first I would have paid around 120 credits for a video I couldn't use.

What to check *before you animate*

- **The face:** put the frame next to your character sheet and make sure it really is you.
- **The outfit:** every piece should match the sheet, down to the gloves and the scarf fringe.
- **The details:** hands, pairs of things, and anything that should match on both sides.

The one rule: nothing gets animated until its still looks right. A redo costs about 3 credits as an image and about 120 as a video.

Step 4

The prompt, *word for word*

This is the exact 12 second prompt that went into Seedance, Kling, Wan and MiniMax, with the start frame attached. It is written as a **timeline**, so each couple of seconds has its own job: spotting the globe, shaking it, a very fast push into the glass, the reveal of the gingerbread street and a close-up of me laughing.

```
Keep the woman from the start frame and the character sheet identical the whole time: same face, blue-grey eyes, bangs, red lipstick, red wool beret, red fringed scarf, long cream double-breasted coat, black leather gloves, black trousers, black boots. She always stays fully human and unchanged.
A grey, rainy London street of Georgian townhouses in winter, with a red double-decker bus and black cabs, overcast light, wet pavement.
0-3s: she walks toward the camera through the drizzle, the camera tracks backward in front of her. She notices a small glass snow globe sitting on a wet bench beside the pavement and stops.
3-5s: she picks up the snow globe in her gloved hands; close-up of the globe: inside is a tiny gingerbread version of this London street with a tiny gingerbread double-decker bus. She gives it one quick shake and sugar snow swirls inside.
5-6s: a very fast push straight into the glass of the globe, under one second, no white-out, no fade, no long blur; we burst straight through into the full-size street.
6-9s: she is standing in the middle of the street, and the ENTIRE street is now gingerbread, both sides and the road: every Georgian townhouse is baked gingerbread with thick white royal-icing trim on windows and rooftops, the double-decker bus is a gingerbread bus with candy windows and icing details, the cabs are gingerbread cars, lamp posts are red-and-white candy canes, gumdrops and peppermint swirls line the pavement, sugar snow falls gently, warm golden fairy lights glow everywhere. The camera glides past her and sweeps low along the street, panning across the gingerbread townhouses, the candy-cane lamp posts and the gingerbread bus to show off the whole transformed street.
9-12s: the camera swings back to a medium close-up of her as she looks up at the falling sugar snow and laughs, gingerbread houses with glowing fairy lights behind her.
Photorealistic, cinematic, handheld, natural skin texture, magical but believable.
```

The same prompt gave four different snow globes: Seedance, Kling, Wan and MiniMax.

Put seconds in your prompts. Models follow a timeline much better than one long paragraph. If you only take one thing from this pack, take this.

The surprise

Most models *won't take both*

I assumed I could give every model both the start frame and my character sheet. Most of them won't let you, and this turned out to decide the whole ranking, because the one model that took both is the one that still looked like me at the end.

Model	Start frame	Character sheet or my photos
Seedance 2.5	✓ Yes	✓ Yes, both together
Kling 4.0	✓ Yes	✕ Every attempt with my photos failed
Wan 3.0	✓ Yes	✕ You choose one or the other
MiniMax H3	✓ Yes	✕ Only instead of a start frame
Veo 3.1	✓ Yes	✕ Not supported at all

The 8 second version *for Veo*

Veo 3.1 only makes clips of up to 8 seconds, so Claude squeezed the same story into a shorter timeline. The first attempt was rejected by the safety filter as NSFW, for a woman in a long wool coat holding a snow globe, so expect to retry.

```
Keep the woman from the start frame identical the whole time: same face, blue-grey eyes, bangs, red
lipstick, red wool beret, red fringed scarf, long cream double-breasted coat, black leather gloves,
black trousers, black boots. She always stays fully human and unchanged.
A grey, rainy London street of Georgian townhouses in winter, with a red double-decker bus and black
cabs, overcast light, wet pavement.
0-2s: she walks toward the camera through the drizzle and notices a small glass snow globe on a wet
bench, and picks it up.
2-4s: close-up of the globe in her gloved hands: inside is a tiny gingerbread version of this London
street with a tiny gingerbread double-decker bus. She gives it one quick shake and sugar snow swirls
inside.
4-4.5s: a very fast push straight into the glass, no white-out, no fade; we burst through into the full-
size street.
4.5-8s: she stands in the middle of the street and the ENTIRE street is now gingerbread, both sides and
the road: every Georgian townhouse is baked gingerbread with thick white royal-icing trim on windows and
rooftops, the double-decker bus is a gingerbread bus with candy windows and icing details, the cabs are
gingerbread cars, lamp posts are red-and-white candy canes, gumdrops and peppermint swirls line the
pavement, sugar snow falls gently, warm golden fairy lights glow everywhere. The camera sweeps past her
along the gingerbread street, then swings back to a medium close-up of her looking up at the sugar snow
and laughing.
Photorealistic, cinematic, handheld, natural skin texture, magical but believable.
```

The ranking

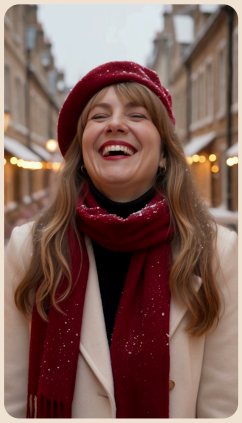

From worst *to best*

#5 Veo 3.1

START FRAME ONLY · 8 SECONDS MAX

Last place surprised me, given how much hype Veo gets. Even in the very first shot that just isn't my face, and it doesn't look like a real person at all. The animation looks poor and the gingerbread street is completely unrealistic, so this is the one you'd recognise as AI from across the room.

#4 Kling 4.0

START FRAME ONLY · PHOTOS FAILED

Kling only had the start frame, because it failed every time we added my photos. The dive into the snow globe is quick, which is exactly what I asked for, and the street does change. It has the same problem as Veo, though, because I just don't look like a real person, and the final part in particular looks too good to be true.

#3 MiniMax H3

GOT MY REFERENCE PHOTOS

MiniMax did get my reference photos, but as soon as the camera starts moving my face begins to flow away and stops being me. The black cabs in the background start off facing in opposite directions, which makes the whole street look ridiculous. In the gingerbread close-up my face looks fine, but again it's too good to be true.

#2 Wan 3.0

START FRAME OR PHOTOS, NOT BOTH

Second place goes to Wan, mostly because the gingerbread transformation itself is impressive, with a gingerbread bus, gingerbread taxis and peppermint swirls everywhere. It changes my face, my teeth and even the colour of my lipstick, though, so by the end it's somebody who only roughly looks like me.

#1 Seedance 2.5 THE WINNER

From the grey street to the snow globe, through the glass and into Christmas London.

Seedance is the only model that took my start frame and my character sheet together, and you can see the difference, because from the first step to the last shot it's still me, with the same face, the same beret and even the same scarf fringe. It's also the only one where I genuinely couldn't tell straight away that it was AI, with natural skin, natural light and a street that could actually exist.

It isn't perfect, because the white-out going into the globe is a bit long and the buildings stay stone instead of turning fully into gingerbread. It's still the only one I'd believe is a real video of me, and for me that matters most.

The lesson behind the ranking: the model that kept my face was the one that could see my character sheet and my start frame at the same time. Check what a model accepts before you judge how good it is.

Part two

The gingerbread bus *at the bus stop*

Because Seedance won, I asked Claude to carry on from the end of that video. A gingerbread double-decker pulls up at the bus stop, I snap a piece off the side and eat it, and the gingerbread driver is not impressed. Seedance got the snow globe video as its reference, an image of the bus and driver, and my face photos.

The bus reference image.

My part two prompt, *word for word*

```
Continue the reference video forward seamlessly from its last frame: the same woman in the red beret,
red fringed scarf, long cream double-breasted coat and black leather gloves, on the same snowy Christmas
London street of Georgian townhouses covered in warm fairy lights, with candy-cane bollards and gently
falling snow. Keep her face, outfit, lighting and the street exactly as in the video. The reference
image shows what the gingerbread bus and the gingerbread driver look like; the other reference photos
show her face and outfit.
0-3s: she is still looking around the street in wonder. Behind her, a full-size double-decker bus made
entirely of baked gingerbread drives slowly down the street and pulls up at a bus stop beside her, with
thick white royal-icing trim, red boiled-candy windows, gumdrop headlights and peppermint-swirl wheels,
snow crunching under the tyres.
3-5s: she turns and notices the bus, smiles, and walks up to the side of it near the front.
5-8s: with a mischievous grin she snaps off a corner piece of the white icing trim from the side of the
bus with her gloved hand, crumbs falling. Through the front window, the bus driver, a life-size
gingerbread man in a driver's cap with icing eyes, turns his head and glares at her, annoyed.
8-11s: she takes a big crunchy bite of the piece, closes her eyes for a second enjoying it, then looks
at the driver, gives a small innocent shrug and takes another bite.
11-12s: the driver crosses his gingerbread arms; she laughs.
Photorealistic, handheld, natural skin texture, real-looking people, not glossy or CGI, same warm dusk
light as the video. Sound: soft snow crunch, a bus engine and hiss of brakes, a loud gingerbread crunch,
gentle Christmas ambience.
```

Bonus

The bauble *trigger*

Before the snow globe won, I also tried a red Christmas bauble on a bare tree that pops when I tap it and sends a ripple of golden light down the street. Here it is in full, in case it suits your city better.

```
Keep the woman from the start frame and the character sheet identical the whole time: same face, blue-grey eyes, bangs, red lipstick, red wool beret, red fringed scarf, long cream double-breasted coat, black leather gloves, black trousers, black boots. She always stays fully human and unchanged.
A grey, rainy London street of Georgian townhouses in winter, with a red double-decker bus and black cabs, overcast desaturated light, wet pavement, a bare tree beside the pavement.
0-4s: she walks toward the camera through the drizzle, the camera tracks backward in front of her. She notices a single shiny red glass Christmas bauble hanging from a branch of the bare tree, the only colourful thing on the grey street, and slows down, curious.
4-6s: close-up: she reaches out and gently taps the bauble with her gloved fingertip. It pops in a tiny burst of golden sparkles.
6-9s: from the point where her finger touched it, a circular ripple of golden sparkling light spreads outward in all directions across the pavement, up the buildings and along the road, and the ENTIRE street turns into gingerbread, both sides and the road: every Georgian townhouse becomes baked gingerbread with thick white royal-icing trim on windows and rooftops, the red double-decker bus becomes a gingerbread bus with candy windows and icing details, the black cabs become gingerbread cars, lamp posts become red-and-white candy canes, gumdrops and peppermint swirls line the pavement, the rain becomes gently falling sugar snow, warm golden fairy lights glow everywhere.
9-12s: she looks around in wonder and laughs as the sugar snow falls on her beret, the camera slowly orbits around her to show the fully transformed gingerbread street.
Photorealistic, cinematic, handheld, natural skin texture, magical but believable. Sound: soft rain, a glassy pop, then twinkling chimes and a warm Christmas swell.
```

Three things *to take away*

1. **Make a character sheet** with your face, front, side and back, so the model knows you from every angle.
2. **Make the first frame as an image**, because a redo costs about 3 credits instead of about 120.
3. **Make one character sheet per era or outfit**, so every look is locked in before the video starts.

Make it with us. Every week inside Women Lead AI we break down workflows like this with women building real things with AI. My London, Paris and Silicon Valley prompt packs are free at **womenlead.ai/resources**.
