

FREE PROMPT PACK

5 Motion *Graphics*: the prompts

The exact prompts behind the five effects in my reel: a papercut collage, a papercraft travel map, a blueprint that assembles itself, an Apple style phone reveal and a receipt that prints your list. No After Effects, no templates. Just Claude Code.

BY WOMEN LEAD AI · WOMENLEAD.AI

BEFORE YOU START

You talk. Claude *animates*.

Every effect in the reel was built by Claude Code on top of a normal talking head clip: one camera, one take, me at my desk. I described what I wanted in plain English, Claude wrote the animation as code, and rendered it timed to the exact words I say.

You don't need to know how to code. You need to know what you want to see, and how to give notes. This pack gives you both.

WHAT YOU NEED

- **Claude Code.** It comes with a Claude Pro or Max plan. Install it from claude.com/claude-code.
- **HyperFrames**, a free, open source plugin from HeyGen that turns HTML into video, with about 450 ready made blocks (maps, 3D devices, paper textures, glass). In your terminal run:

```
claude plugin marketplace add heygen-com/hyperframes
claude plugin install hyperframes@hyperframes
```

- **Your clip** in a folder Claude can see. Vertical or horizontal, any camera.
- **About 30 minutes** per effect the first time, including two rounds of notes.

> **Permission moment:** you don't need all five. Pick the one that fits the video you're making this week and start there.

THE PROMPT THAT DOES THE HEAVY LIFTING

Start every edit *like this*

Open Claude Code in the folder with your clip and paste this first. It sets up the project, transcribes you and finds the exact moments to hit.

```
I want to edit my talking head clip [FILE NAME] into a 9:16 reel with
motion graphics, using the HyperFrames plugin.
1. Transcribe it with word timestamps and pick my cleanest take of
   every line (cut retakes, never clip the end of a word).
2. Crop me to 9:16 with a locked framing, centred on my face.
3. Add white subtitles, 2 to 3 words at a time, just under my chin.
4. For each effect below, show me on camera saying the number, then
   cut to the effect full screen while I keep talking, timed to my words.
5. Keep my face clear: nothing ever sits on my face.
Before you build anything, show me the plan with timestamps.
```

THE TRICK THAT CHANGED EVERYTHING: REFERENCES

My first versions were fine. They got good the moment I sent Claude a reference for each effect: a Pinterest or Instagram video of the style I wanted.

```
Here's a reference for this effect: [LINK]. Study it frame by frame
before building: the colours, the textures, the pacing, how things
enter and leave. Then rebuild my effect in that style, with my content.
```

Try this now: save five motion design videos you love on Pinterest. Those are your reference library for every effect in this pack.

EFFECT 01

01

Papercut collage

Photocopy cut-outs of you on a bold background, stop motion at 12 frames a second, with doodles that change every beat. Perfect for an intro or anything personal.

THE PROMPT

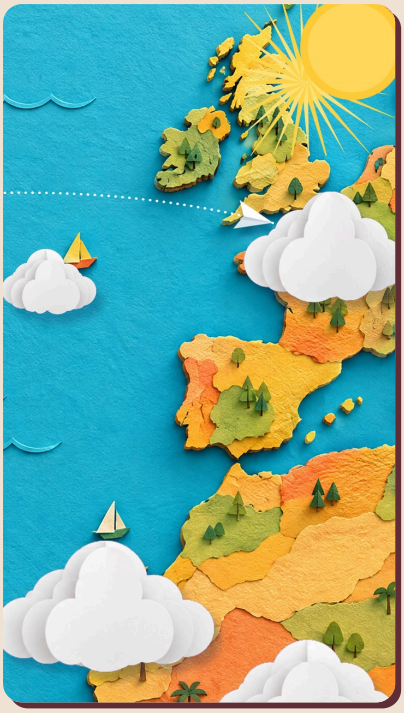

```
Make a papercut collage scene for the moment I say "[YOUR
LINE]". Style: bold coral red background with film grain,
me cut out of my footage (remove the background) and turned
into a black and white photocopy with halftone dots. Stop
motion at 12 fps: swap to a new cut-out pose of me every
0.4 seconds, each with its own doodle (a dashed ellipse,
wavy lines, a glowing ring). Open with the words "PAPER
CUT" split into pieces that slide together over a
crosshair. Add a small paper rustle sound on every pop.
```

What I learned: Ask for 6 to 8 different poses from your footage so the swaps feel alive. Same pose twice reads as a glitch.

EFFECT 02

02

Papercraft travel map

A flight path that draws itself across a world made of paper, with paper clouds drifting over it. For travel, origin stories or 'from here to here' moments.

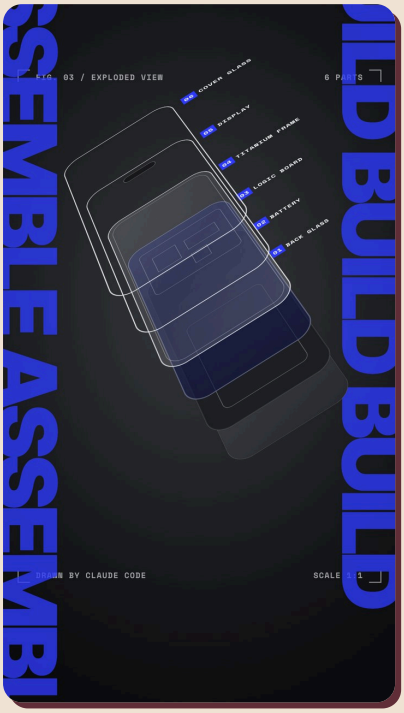

THE PROMPT

```
Make a travel map scene: a 3D papercraft world (layered
paper land, paper boats, a paper sun with turning rays)
with paper clouds drifting over it in layers. A paper plane
flies from [CITY A] to [CITY B] leaving a white dotted
trail, and the camera follows it. Pop a label on each city.
IMPORTANT: start from a real map of this region and restyle
it, so the coastlines and city positions are accurate.
```

What I learned: I learned this one the hard way: an AI-drawn map put Paris in the wrong place. Always give it a real map as the reference image.

EFFECT 03

The blueprint that builds itself

An object drawn in white lines, exploded into its parts with labels, then filled in and snapped together. For showing how you built something.

THE PROMPT

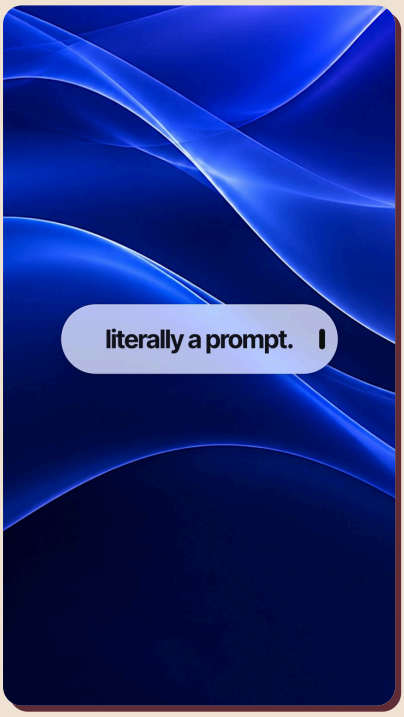

```
Make an exploded view blueprint of a [PHONE / BICYCLE /
YOUR PRODUCT]. Open on an extreme zoom of one corner being
bent round with bezier handles, like in Illustrator, then
pull out. Tilt the object to an isometric view and explode
it into 5 or 6 parts drawn in thin white lines on a dark
background, each with a small label. Big blue "ASSEMBLE"
type scrolls behind. When I say "fills it in", give each
part its real material, snap them together and turn it to
face us.
```

What I learned: End on just the finished object. Don't put an app screen on it: the object assembling is the whole point.

EFFECT 04

Apple style phone reveal

Soft periwinkle haze, small words, a phone that floats in with lots happening on its screen, and a liquid glass pill to finish. It looks like a launch event.

THE PROMPT

```
Make an Apple style product reveal. Soft periwinkle
gradient, small centred words fading in one at a time ("Say
hello", "to the reveal"). Then a phone floats up and turns
slowly, showing a blue iOS lock screen. Keep the screen
busy: a live activity grows out of the Dynamic Island with
a progress ring, notifications stack in, swipe up to the
home screen as the icons pop in, tap an app and it opens.
Finish by pushing into the wallpaper onto a liquid glass
pill that says "[YOUR LINE]". Don't add subtitles under the
pill.
```

What I learned: A still image on the phone screen looks flat. Ask for at least three things to happen on the screen.

EFFECT 05

05

The receipt

A paper roll that unspools your list line by line, with playful 3D objects floating around it. For tools, costs, wins, or any list.

THE PROMPT

```
Make a receipt scene. Light grey studio background, a paper
receipt roll unspooling downwards with big bold "KEEP FOR
YOUR RECORDS" type at the top, then my list printing line
by line in a mono font: [YOUR SECTIONS AND LINES].
Highlight each section as I say it, end on a big TOTAL
line, a barcode and a PAID stamp. Float six playful 3D
objects around it (a coiled cord, a key, a pompom, small
balls) that bob gently. Add a printer sound and a ka-ching
on the total.
```

What I learned: Keep prices honest. If it's free, say $0. Real numbers make this one land.

GIVING NOTES

Edit like you have *an editor*

The first render is never the final one. Mine took five rounds. Here's how to give notes that Claude can act on straight away.

1. **Give a timestamp.** "At 0:22 the map is wrong" beats "the map looks off".
2. **Send a reference.** One link does more than a paragraph of adjectives.
3. **Say what you don't like, too.** "No white frame around the cards", "nothing on my face", "don't say the same text twice".
4. **Ask for a review page.** Ask Claude to put the render on a page where you can pause and leave notes on the exact frame.

```
Render a review version and give me a page where I can pause the video
and leave timestamped notes. When I say "notes are in", read them all,
fix every one, and tell me what you changed.
```

You've got the prompts. *Now come build with us.*

Women Lead AI is a community of women learning AI together, to grow careers, build businesses and stop feeling like we're figuring it out alone. Inside: weekly live sessions, real workflows you can steal, and women who actually get it.
