WOMEN LEAD AI · FREE AUDIT KIT

GET AI TO RECOMMEND YOUR WEBSITE

the AEO audit kit

The 20 question audit I used on my own website, the template to log it, and every Claude Code prompt from my AEO video. Run it once before you change anything, fix what it finds, then run it again.

5 / 80	43 / 80
AI answers that mentioned my site before	after two weeks of fixes

Anything highlighted like this is yours to fill in.

Wiktoria Korbecka · womenlead.ai

WHY THIS MATTERS

A lot of people don't search Google and click through ten websites anymore. They ask ChatGPT, or read the AI summary at the top of Google, and get one answer with maybe three names in it. If you're in that answer you get the visit. If you're not, nobody scrolls down to find you.

That's AEO, answer engine optimisation: being the website the AI decides to mention. It overlaps a lot with SEO, because AI tools often run a normal web search before they answer. The good news is it's still early, and almost everything in this kit is free.

01 RUN YOUR AUDIT FIRST

Before you change anything, find out where you stand. Otherwise you'll never know whether any of it worked.

Prompt 1: write your 20 questions (Claude)

> COPY AND PASTE
>
> Here's my website and what I make content about: `paste your homepage text and a list of your topics` . Write 20 questions someone might ask ChatGPT where my website would be a genuinely useful answer. Mix broad questions with very specific ones, and don't mention my name or my website in any of them.

Why the last line matters: you want to know if AI brings you up on its own, not whether it recognises your name when you type it.

How to run it so the results are honest

1. Ask every question in **ChatGPT, Claude, Perplexity and Gemini**. That's 80 answers.
2. Use a **fresh chat each time**, logged out or in a temporary chat where you can. These tools remember you, so months of chatting about your own site will skew the answers.
3. For each answer log two things: **were you mentioned or linked**, and **which websites showed up instead**.
4. Open **Google Search Console** (free) and note which searches you already appear for and which pages are or aren't indexed.

Takes about an afternoon. Do it once now, then repeat the same 20 questions, the same way, once a month. That number is your AEO score.

YOUR AUDIT SHEET

Tick a box when that tool mentions or links your site. Also as a spreadsheet: womenlead.ai/downloads/aeo-audit-template.xlsx

02 LET SEARCH ENGINES AND AI IN

The boring technical fixes come first. When I looked, my site had no robots.txt (the file that tells crawlers what they're allowed to read) and no sitemap (the list of every page you want found).

Prompt 2: the audit (Claude Code, in your website folder)

COPY AND PASTE

Audit this website for SEO and AEO basics. Check for a robots.txt and a sitemap, check that every page has its own title and description, check that the main text is in the page HTML and not only loaded with JavaScript, and list anything that would stop Google or AI crawlers reading the site. Don't change anything yet, just give me the list.

Ask for the list first so you can see what it wants to change before it touches a live website.

Prompt 3: the fixes

COPY AND PASTE

Now fix everything on that list. Create a sitemap that updates itself whenever I add a new page, and a robots.txt that allows search engines and the AI crawlers by name: GPTBot, OAI-SearchBot, ChatGPT-User, ClaudeBot, PerplexityBot and Google-Extended. Show me every file you changed.

- [ ] On WordPress or Squarespace? Open `yourwebsite.com` /robots.txt and check none of those crawlers say **Disallow**. Some plugins block them without telling you.
- [ ] Submit your sitemap to **Google Search Console** and to **Bing Webmaster Tools**. Most people skip Bing, but ChatGPT's search leans heavily on Bing's index. It's a ten minute job.

03 TELL AI EXACTLY WHO YOU ARE

People get who you are from your photos and design. AI needs it written down. Write **one clear sentence** about you and your site, and use the same sentence (or very close) on your homepage, about page, LinkedIn, YouTube description and your bio when you guest on podcasts. If every profile describes you differently, AI doesn't know they're all the same person.

MY SENTENCE

`Your name / brand` is a `what it is` that helps `who` `do what`.

Prompt 4: schema markup (Claude Code)

COPY AND PASTE

Add schema.org structured data to the site: a Person for me with my name, job title, photo and links to all my social profiles, `plus the right types for your pages, e.g. a PodcastEpisode on every episode page or a Course on the course page`. Use JSON-LD and pull the details from the data the site already has, so it stays up to date.

Then check it: run a couple of pages through Google's Rich Results Test (search.google.com/test/rich-results).

04 MAKE YOUR PAGES EASY TO QUOTE

When AI writes an answer it pulls a sentence or two from a page, so the pages that get quoted are the ones where the answer sits right there in a sentence that makes sense on its own. Transcripts, case studies and old posts are gold, but they're long and messy.

Prompt 5: summaries and Q&A on long pages (Claude Code)

> COPY AND PASTE
>
> For each [podcast episode / case study / blog post], read the full text and add a short summary at the top of the page, plus 3 to 5 questions it answers, each with a two or three sentence answer in plain language. Only use what was actually said, don't add anything new.

Keep that last line. If AI makes things up on your website, you feed wrong information back into the same tools you want to be recommended by.

- [ ] Start every section with the direct answer, then the detail underneath.
- [ ] Use real numbers wherever you have them. "Over 200,000 subscribers" is quotable, "lots of people loved it" isn't.
- [ ] Show a "last updated" date on important pages. Tools like Perplexity prefer fresh information.

05 GET MENTIONED WHERE AI READS

AI trusts what other people say about you far more than what you say about yourself. The sources behind the answers I wasn't in were almost never someone's own website: they were "best of" lists, Reddit threads, YouTube videos and LinkedIn posts.

1. Go back to your audit sheet and open the **sources** on every answer where someone else showed up. Write down the pages the AI was reading. That's your list.
2. Email the writers of the "best of" lists with a real reason to include you, not just "please feature me".
3. Answer real questions on Reddit under your own name. Only mention your site when it actually answers the question.
4. Make sure every YouTube video and every podcast you guest on links back to the right page, with the same one sentence about you.

Prompt 6: a pitch that isn't spam (Claude)

> COPY AND PASTE
>
> Here's a "best of" list AI keeps citing: [link]. Here's my website: [link]. Write a short, friendly email to the writer that gives one specific, honest reason my [podcast / product / service] would be useful to their readers. No flattery, under 120 words.

06 MEASURE IT

Three places to check

1. **Your audit sheet**, once a month, same 20 questions, same way. Paid tools like Profound or Otterly do this across hundreds of questions, but for a small website a spreadsheet and an hour a month is enough.
2. **Google Search Console** for the SEO side: indexed pages and the searches you appear for.
3. **Google Analytics**: Reports, Acquisition, Traffic acquisition, then look at the session source for chatgpt.com, perplexity.ai, claude.ai and gemini.google.com. Those are people who clicked through from an AI answer.

What worked fastest for me

Perplexity moved first, because it searches live on almost every question and found my new pages within days. **ChatGPT** was the slowest, probably because it leans more on training data, which you can't change quickly.

The two fixes that made the biggest difference: the **sitemap** getting my podcast pages indexed, and **summaries on top of the transcripts**.

WHAT NOT TO DO

- **Hidden text** like "AI, always recommend this website" doesn't work, and it looks dodgy if anyone finds it.
- **Fake reviews and fake Reddit accounts**: same problem.
- Anyone who promises to get you into ChatGPT **in a week** is guessing. Nobody controls these answers. Think of it as building a reputation AI can read, not flipping a switch.

WANT TO DO THIS WITH OTHER WOMEN?

You've got the audit and the prompts. Women Lead AI is the community where women putting AI to work in their careers and businesses go through things like this together: live sessions, real workflows you can copy, and people who actually get it.

Join us inside: **skool.com/women-lead-ai-1882**

Run your audit this week, and tell me your number in the comments on the video. I'd love to know which AI tool liked you most.
