

FREE PROMPT PACK

Silicon Valley *Through Time*: the prompts

Every prompt I used to live through 60 years of the Bay Area in one AI video: the Summer of Love, the first Amazon order, Snake on a Nokia, the Facebook poke, the first Tinder match and a robotaxi with nobody driving.

Start here

Six moments, *one face*

This is the workflow behind my Silicon Valley reel. It builds on my free **Time Travel Video Kit** (the London and Paris workflow) and adds three new tricks: **first frames that look real**, **screens you can actually read**, and **brand names fixed in code**.

Year	The moment	Shots
1967	The Summer of Love, Haight-Ashbury	1 × 6s
1995	Amazon launches: my first online order	2 × 4s
1998	The Nokia 5110 launches: Snake	2 × 4s
2006	Facebook opens to everyone	2 × 4s
2012	Tinder launches	2 × 4s
2026	Self-driving taxis take over	my own phone footage

What you need

- **Higgsfield**: GPT Image 2.6 for character sheets and first frames, Seedance 2.5 for video.
- **Claude Code** with the Higgsfield connector, to write prompts, run jobs, build the screens and stitch the video.
- **2 to 3 clear photos of your face** and a plain character sheet of you (the Time Travel Video Kit shows how).

What it cost

Character sheets and first frames cost about **2.75 credits each**. A 6 second clip at 1080p was **96 credits**, a 4 second clip about **78**. The whole video came to roughly **1,000 credits**, because every frame was checked before a single clip was rendered.

The one rule: nothing gets animated until its still looks right. A redo costs 3 credits as a still and 80 to 130 as a video.

Step 1

A sheet for *every era*

Start from your plain character sheet, then dress the same you for each moment. GPT Image 2.6, 16:9, quality high, 2K. References: the plain sheet first, then 2 face photos. Give every era its own colour palette.

My plain sheet (left) and the 1967 sheet made from it (right).

My 1967 sheet, *word for word*

```
Character reference sheet of the woman in the reference photos, dressed as a young woman in Haight-Ashbury, San Francisco, in the Summer of Love, July 1967. Keep her face EXACTLY as in the photos and the plain character sheet, same age and same soft face shape: blue-grey eyes, natural skin with real texture and light freckles, a small mole on her lower left cheek, a pale frosted nude-pink lip and soft black winged eyeliner. Do not beautify, slim, age or change her face in any way. Costume, historically accurate for a San Francisco hippie in summer 1967, in a palette of marigold, burnt orange, turquoise and cream: a cream cotton cheesecloth peasant blouse with a turquoise and orange embroidered yoke and loose bell sleeves; a long tan suede vest with long swinging fringe at the hem; low-slung burnt orange and marigold paisley bell-bottom trousers; flat brown leather sandals; layered wooden and turquoise bead necklaces; a crown of fresh white daisies and small orange marigolds; round amber-tinted wire-rim sunglasses pushed up into her hair. Hair: her own light honey-brown hair worn long, loose and wavy with a centre parting and her curtain fringe falling softly under the flower crown. Layout on a plain warm light grey studio background: on the left a large close-up portrait facing camera; in the middle a full-length front view standing naturally; then a full-length side view and a full-length back view. Soft even studio light, photorealistic photography, natural proportions, real fabric texture. No text, no labels, no logos, no watermark.
```

Step 2

First frames that *look real*

My first try at 1967 looked painted, because I asked for "faded Ektachrome with light leaks". Vintage filters make AI look more AI. What fixed it: describe a **modern cinema camera that was actually there**, and say no to every effect.

- **Say "shot on ARRI Alexa 35, natural light, true-to-life colour".** The era comes from the clothes, the cars and the street, not a filter.
- **List the effects you don't want:** no filter, no grade, no grain, no light leaks, not painted, not CGI.
- **References:** the era sheet first, then 2 face photos. 9:16, quality high, 2K.

My 1967 frame, *word for word*

```
CHARACTER: the woman from Reference Image 1 (character sheet) with the
face from Reference Images 2 and 3, exactly this face, not beautified,
same age and soft face shape as the photos, wearing exactly the costume
from the character sheet: daisy and marigold flower crown, amber round
sunglasses pushed up in her hair, cream embroidered peasant blouse, long
fringed tan suede vest, beaded necklaces. ONLY she has this face; every
other person is a clearly different person (mixed ages, builds, hair),
nobody dressed like her. HISTORIC MOMENT: July 1967, the Summer of Love
in Haight-Ashbury, San Francisco. SETTING: a sunny Haight-Ashbury street
lined with real painted Victorian houses, a hand-painted 1960s van parked
at the kerb with swirling flowers and a peace sign brushed onto its real,
slightly chipped metal bodywork, young people on a stoop playing acoustic
guitar, someone handing out flowers, 1960s parked cars. All paper and
signs have no readable writing. FRAME: she leans out of the open side
window of the painted van, forearms resting on the window frame, smiling
into the sun, her long wavy hair falling over the door. CAMERA: vertical
9:16, slightly low angle from the pavement, medium shot. LOOK: a real
photograph taken on the day, as if a modern cinema camera was actually
standing on Haight Street in 1967: shot on ARRI Alexa 35, natural
afternoon sunlight, true-to-life natural colour, real skin texture with
pores and freckles, real fabric and suede texture, real depth of field.
No filter, no colour grade, no vintage effect, no light leaks, no haze,
no grain, no vignette, not painted, not illustrated, not CGI. Photoreal,
natural proportions, five fingers.
```

Step 3

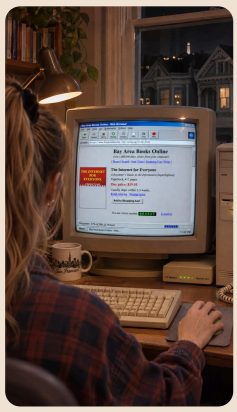

Screens you can *actually read*

Ask an image model for "a 1995 web page" and you get gibberish. So I had Claude Code **build each screen as a real web page**, screenshot it, and gave that screenshot to GPT Image as an extra reference: "the screen shows EXACTLY Reference Image 4".

What I typed into Claude Code

```
Build a 1024x768 HTML page that looks like a 1995 web browser on a grey desktop: title bar,
Back/Forward/Reload/Stop toolbar, a Location bar with the address, and an online bookstore page in Times
New Roman with blue underlined links. Show one book with its cover only half loaded, the price, "Usually
ships within 2–3 weeks", an "Add to Shopping Cart" button, a green visitor counter and a status bar that
says "Document: 47% of 38K". Screenshot it with headless Chrome and save it as a PNG.
```

The same trick for every screen: the Snake game on the 1998 phone, the 2006 social feed with 47 event invites and a poke, and the 2012 swipe card and match screen. For the dating card I generated a fictional man's profile photo first and placed it in the page.

The line that puts it on the monitor

```
ON THE MONITOR: the CRT screen shows EXACTLY the image from Reference Image 4, the whole screenshot
filling the glass edge to edge, every word sharp and readable, with the gentle curve, slight glare and
glow of a real CRT tube.
```

Step 4

Two angles for *every screen*

One shot with a face AND a readable screen looks strange: the phone shrinks, the hands go wrong. Split it in two 4 second shots instead. **A:** over your shoulder, the screen readable. **B:** your face, the screen facing you. Feed the A frame in as a reference for B so the room matches.

2006 and 2012, angle A then angle B.

My 2006 angle B, *word for word*

```
CHARACTER: the woman from Reference Image 1 (character sheet) with the face from Reference Images 2 and
3, exactly this face, not beautified, same age and soft face shape as the photos, wearing exactly the
costume from the character sheet: hot pink lace-trimmed camisole over a white tank, big thin silver hoop
earrings, long flat-ironed straight hair with her fringe swept heavily to one side, shiny pink lip
gloss, black eyeliner. ONLY she has this face. HISTORIC MOMENT: 2006, scrolling through a pile of event
invitations on the new social network. SETTING: exactly the same room as Reference Image 4, now seen
from the front: the same string fairy lights, taped-up photos, floral duvet, pink flip phone and silver
digital camera on the bed, the window with city lights. FRAME: reverse angle from the laptop's point of
view: she sits cross-legged on the bed with the same chunky silver laptop on her knees; the back of the
laptop lid is soft and out of focus along the bottom of the frame, the screen faces her and is not
visible. Her face is lit by the cool screen glow mixed with warm fairy lights. Natural, relaxed
expression: she reads the screen calmly, lips gently closed, a soft natural look, eyes moving across the
screen, her right hand resting on the trackpad. No smirk, no raised eyebrow, no posed expression.
CAMERA: vertical 9:16, slightly above eye level from just behind the laptop lid, medium close-up of her
face and shoulders. LOOK: a real photograph, as if a modern cinema camera was actually in the room in
2006: shot on ARRI Alexa 35, real night interior light, true-to-life colour, real skin texture, shallow
depth of field. No filter, no colour grade, no flash look, no grain, not painted, not CGI. Photoreal,
natural proportions, five fingers.
```

Step 5

The *video* prompts

Seedance 2.5, omni reference mode, 1080p, 9:16, audio on. The approved frame goes in as the **start image**, then the era sheet, then your face photos (or the screen screenshot for angle A). 6 seconds for single shots, 4 + 4 for two angles. I queued all eight 4 second clips at once: about 6 minutes in total.

My 2012 angle A, *word for word*

```
Start exactly from the start frame. CHARACTER: the woman from the start frame, seen over her right shoulder, wearing exactly the costume from Reference Image 1: mint green cropped knit top, daisy headband, stacked gold bangles, long beachy waves. Her face stays out of view. HISTORIC MOMENT: summer 2013, when dating became a swipe on your phone. SETTING: Dolores Park, San Francisco, at golden hour, the skyline and the Transamerica Pyramid soft in the distance, picnickers on the grass. THE PHONE: exactly the same white smartphone as in the start frame, same size, in her left hand, no brand name or logo. ON THE SCREEN: it starts exactly as Reference Image 2, the profile card tilted right with the green LIKE stamp; her right thumb flicks the card off the screen to the right; then the screen changes to exactly Reference Image 3, the 'It's a Match!' screen with two round photos, readable and stable. ACTION: her thumb swipes right in one quick flick; the match screen appears; her free hand lifts slightly in surprise. Anatomically correct hands, five fingers each. CAMERA: one continuous over-the-shoulder shot, slow push in toward the phone, 9:16 vertical, never cuts. Shot on ARRI Alexa 35, warm natural golden hour sunlight, true-to-life colour, shallow depth of field, photoreal, no morphing, the phone keeps its size. No filter, no grain. AUDIO: a soft swipe sound, a bright little match chime from the phone, park ambience with distant chatter and birds, a light breeze, no music, no speech.
```

Two screens in one clip: give Seedance both screenshots (the swipe card and the match screen) and say which one it starts on and what it changes to.

Step 6

Real brand names, *fixed in code*

I built the screens with made-up names so the model wouldn't fight me. Then, after the videos were rendered, Claude Code swapped in Amazon, Facebook and Tinder frame by frame, following the screen as the camera moved. No extra credits, and the text is pixel sharp.

What I typed into Claude Code

```
In this clip, the laptop screen shows "thenetwork" in the blue header bar, "TheNetwork | Home" in the
browser tab and "thenetwork.com" in the address bar. Replace them with "facebook", "Facebook | Home" and
"http://www.facebook.com/home.php" in every frame. Use Python with OpenCV and Pillow: track the header
area with template matching so the patches follow the slow camera push, cover the old text with the
background colour around it, draw the new text in a matching font with soft edges, and keep the original
audio. Show me close ups from the start, middle and end so I can check it.
```

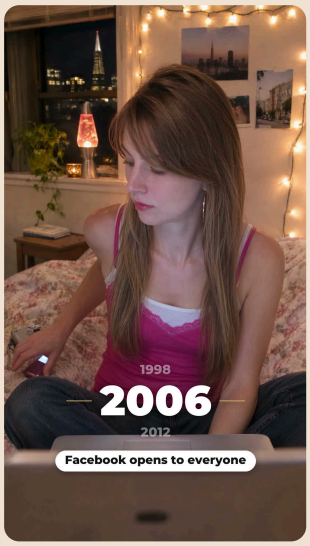

- **If the screen fades** (like the match screen arriving), stop pasting a patch and fill the old word from its surroundings, or you'll see a white box for a few frames.
- **Gradient title bars** need a gradient patch, not a flat colour.
- **Check the dates:** Tinder launched in 2012, so the counter says 2012 even though the scene is 2013 summer.

Step 7

The rolling year *counter*

Instead of a flipping calendar, this one has a rolling counter: the big year in the middle, the previous and next year faded above and below, thin gold lines either side, and a white caption pill underneath. Every clip is trimmed to its best 2.5 seconds, so the whole video is 30 seconds.

Captions that work: plain headlines. "Amazon launches", "Facebook opens to everyone", "Tinder launches". Clever lines like "love becomes a swipe" are harder to read in 2 seconds.

What I typed into Claude Code

```
Stitch the scene videos in order and keep their original audio, no music. Trim each clip to its best
moment so every year is about 5 seconds. Open with "60 years of" / "SILICON VALLEY" / "through the
decades" for the first 2.4 seconds. Then draw a year counter in the bottom third: the current year big
and bold in Montserrat Black, the previous and next years small and faded above and below, thin gold
lines either side, rolling up to the next year at every cut. Under it, a white rounded pill with the
caption for that moment. Add a soft paper tick at every year change. Render frame by frame with Pillow
and FFmpeg, 1080x1920, 30 fps.
```

Your turn

Swap in *your* city

Pick six moments you can **see** happen, not just backdrops: a launch, a screen, a crowd, a first. Fact check every date before you build anything (a wrong date is a whole new clip).

Era	Outfit line I used
1967	flower crown, peasant blouse, fringed suede vest, paisley bell-bottoms
1995	oversized plaid flannel, white ribbed tank, velvet choker, scrunchie ponytail
1998	lilac baby tee, low-rise flares, platform sneakers, butterfly clips
2006	pink lace cami over a white tank, low-rise bootcut jeans, side-swept fringe
2012	mint cropped knit, denim cutoffs, daisy headband, gold bangles
2026	my own clothes and my own phone footage from a real robotaxi

Use real footage where you have it. The last scene is my own video from a driverless taxi: one second outside, two inside. It grounds the whole thing in the present.

Make it *with us*

The full London and Paris workflow is in my free **Time Travel Video Kit**, and every week inside **Women Lead AI** we break down workflows like this with women building real things with AI. Find it all at **womenlead.ai/resources**.
