WOMEN LEAD AI · FREE CHEAT SHEET

THE CLAUDE CODE CHEAT SHEET

the other 90% of Claude, in plain English

Most people use Claude as a chat box. This is everything else from my Claude Code basics video: what each feature is, where it lives in the Claude desktop app, and the prompts to copy and paste so you can try it today.

01 **Connectors**

02 **MCP**

03 **API keys**

04 **Skills**

05 **Plugins**

06 **Slash commands**

07 **Projects**

08 **Artifacts**

09 **Routines**

Anything highlighted like this is yours to fill in.

Wiktoria Korbecka · womenlead.ai

01 CONNECTORS

Give Claude access to the tools you already use.

WHERE Settings > Connectors > Discover, then Connect and log in

Start with Gmail, Google Calendar and Google Drive. Read the permission screen before you say yes, and ask Claude for drafts first so nothing goes out without you seeing it.

COPY AND PASTE

Check my inbox for anything from clients this week that needs a reply and draft the replies in Gmail. Don't send anything.

COPY AND PASTE

A client in Chicago asked when we can meet on Thursday. Check my calendar and draft a reply with two times that work, in their time zone and mine.

02 MCP

One standard plug that lets any app talk to AI.

MCP stands for Model Context Protocol. Every connector is an MCP server under the hood. If a tool you use isn't in the connectors list, look on its website for its MCP server link and give it to Claude.

COPY AND PASTE

Add this MCP server for me and connect it: paste the link from the tool's website

03 API KEYS

A password with your credit card attached.

Never paste a key into the chat. If one leaks, delete it on the tool's website and make a new one.

COPY AND PASTE

Create a .env file for this project with a placeholder for my ElevenLabs API key, add .env to .gitignore, and tell me when it's ready for me to paste the key in myself.

Safer: GitHub Secrets for automations. **Safest:** a 1Password reference (op://vault/item/field) in your .env, so the real key never sits in a file at all.

04 SKILLS

A recipe card that tells Claude exactly how you like a task done.

WHERE Settings > Skills

> COPY AND PASTE
>
> Turn what we just did into a skill, so you can do it the same way next time.

05 PLUGINS

A gift box of skills, slash commands and MCP connections.

WHERE Settings > Plugins > Discover

The useful ones for business: marketing, sales, design and PDF. Only install plugins from sources you trust.

> TRY IT WITH THE MARKETING PLUGIN
>
> Plan my content for `January`.

06 SLASH COMMANDS

Shortcuts you type with a /.

WHERE Type / in the chat box

Command	What it does
/init	Writes a CLAUDE.md briefing for your folder, so Claude knows what the project is about every time.
/clear	Starts a fresh chat.
/compact	Squashes a long chat into a summary so you can keep going.
/context	Shows how full Claude's memory is.
/rewind	Goes back to an earlier point in the chat.

Every skill you add becomes its own slash command too.

07 PROJECTS

In Claude Code, a project is a folder.

Each folder has its own CLAUDE.md, its own .env keys, its own MCP servers and settings. Make one folder per area of your business, or one per AI team member.

08 ARTIFACTS

A little web page instead of a wall of text.

Dashboards, checklists, one page summaries: anything that's easier to look at than to read.

> COPY AND PASTE
>
> Show me this month's numbers as a one page report with a chart. Make an artifact.

09 ROUTINES

A job Claude runs on a schedule, even with your laptop closed.

Routines run in the cloud and can use your connectors, skills and plugins. Three to start with:

> EVERY MONDAY AT 7:00
>
> Look at my calendar and inbox for the week and give me my three priorities, the meetings I need to prep for and anything urgent I missed last week.

> EVERY DAY AT 18:00
>
> Read today's client call notes and draft a follow-up email for each one with what we agreed and the next steps.

> EVERY TUESDAY
>
> Look at my YouTube and Instagram analytics from last week, tell me what did well and what didn't, and suggest ideas to improve.
